

## ITP104 Final Project Summary

### Topic and Purpose

As this was the first time that I learned HTML and CSS, I decided to use my newly learned web development skills to code my personal portfolio. While I had never considered a career in web development, this class made me realize that I had a huge passion for this field and wanted to make a website that really showcased my skills and personal style. The color scheme and use of spaces, as well as the overall design are all aspects of my own style and personality, and displaying that to the world was my purpose.

### Elements

- Form with a confirmation page
  - In the “Contacts” page of my website
- Transitions and Transformations
  - Home page
    - Flip animation on the bottom left
      - Use of keyframes and transform
      - Animation: ease-in-out infinite
  - Resume page
    - Transform and translate were used for the parallax
    - Linear gradient and webkit was used for the header with my name
      - When you hover over my name, the text changes color and is underlined
  - Projects page
    - Overlay effect
      - When you hover over the two images next to “Projects” title, it leads to two pages – “Moodboard” and “Lookbook”
  - Moodboard page
    - -webkit-input-placeholder
  - Lookbook page
    - -webkit-transform: rotate(180deg) for the title “Chaerin’s Lookbook”
- jQuery plugin
  - Lightbox: <http://lokeshdhakar.com/projects/lightbox2/>
    - Moodboard page
      - When you click on each image → lightbox
